

Hirepool — Deliverables

Checklist (Verify After Each Phase)

Check off each item after building. Don't move to the next phase until everything in the current one is ticked.

Phase 1 — Foundation, Design System & Auth

- ☐ App name pulled from one config value (`APP_NAME`) — not hardcoded anywhere (logo, page title, manifest)
- ☐ Color system applied: primary blue `#0A66C2` , backgrounds white/ `#F3F4F6` , text `#1F2937` , verified `#16A34A` , boost `#F59E0B` , danger `#DC2626`
- ☐ Signup works for all 4 roles: candidate, company, verifier, admin
- ☐ Candidate signup requires phone OTP verification before proceeding

- ☐ Verifier/Admin signup or login enforces 2FA (TOTP)
 - ☐ Candidate can select category (Fresher/Experienced/Executive) at signup and it's stored correctly
 - ☐ Database tables created: `users` , `candidate_profiles` , `company_profiles` , `verification_logs` , `admin_audit_logs` , `roles_master` , `platform_badges_master` , `companies_master` , `messages`
 - ☐ Row Level Security tested: a candidate account cannot read another candidate's row via API/console
 - ☐ Row Level Security tested: a company account cannot see any candidate's phone/email without a valid unlock record
 - ☐ `roles_master` pre-seeded with 100+ real role names
 - ☐ Landing page live with hero, 3-step explainer, and two distinct CTAs (candidate vs company)
 - ☐ Site loads and looks correct on mobile width, tablet width, and desktop width
-

Phase 2 — Candidate Portal

- [] Fresher form shows only Fresher fields; Experienced/Executive show their own field sets
- [] Coding platform badge/rank is a **dropdown per platform** pulling from `platform_badges_master` — no free-text badge entry possible
- [] Questions-solved is stored as a number per platform, and does **not** produce any Hirepool-assigned tier badge on the profile
- [] Primary role field is a searchable combobox pulling from `roles_master`, not a plain static dropdown
- [] Secondary roles can be added as removable chips using the same searchable combobox
- [] Experienced/Executive: company name field is a searchable dropdown from `companies_master` — free typing is blocked, with an "request to add company" path for missing companies
- [] Experienced/Executive: designation field reuses the `roles_master` searchable combobox
- [] Resume field only accepts a valid, reachable Google Drive link (basic link validation on submit)
- [] Draft save works; submit moves status to "Under Review"
- [] Status tracker visible to candidate with correct stages and timestamps
- [] Rejected/Needs-Info candidates can edit and resubmit only the flagged parts

- [] Post-approval: profile card preview matches exactly what companies will see
 - [] "Actively looking" / "Not looking" toggle changes visibility without deleting the profile
 - [] Candidate can see a log of which companies unlocked their contact
 - [] Boost purchase flow works and applies the amber highlighted border in search results for the correct duration
 - [] Achievements module: candidate can add Projects, Research Papers, and Achievements/Wins after approval
 - [] Achievements show as "Verified" or "Self-reported" correctly based on verifier action
 - [] Profile card shows: platform chips w/ native badges, role + experience line, secondary role chips, skill chips, domain chip, resume link, achievements summary chip, verified checkmark, MNC/Startup/FAANG tags where applicable
 - [] Contact row (phone/email/WhatsApp icon) is hidden until a company unlock exists
 - [] Candidate Inbox: can see and reply to messages sent by companies, with no restriction/paywall on the candidate side
-

Phase 3 — Company Portal

- ☐ Company signup requires a company (domain) email
- ☐ New company account starts unverified; browsing works but unlocking is blocked until verified
- ☐ Search grid renders candidate cards using the same card component from Phase 2
- ☐ Filters work correctly: Tier, coding platform + native badge/rank filter, questions-solved range, experience years, skills, domain, role (searchable), location, notice period, Verified-only toggle
- ☐ MNC Alumni / Startup Experience / FAANG-MAANG Alumni filters work as toggle chips
- ☐ Sort options work: Relevance, Most recently approved, Boosted-first (boosted cards show amber border)
- ☐ Unlock button deducts one credit and reveals phone/email/WhatsApp correctly
- ☐ Unlocked candidates persist in "My Unlocked Candidates" even after the monthly quota resets
- ☐ In-app messaging: Free-plan company can message up to its capped number of distinct candidates per month, then gets prompted to upgrade
- ☐ In-app messaging: paid plans reflect their higher/unlimited caps correctly

- ☐ Message thread view shows read receipts once candidate opens the message
 - ☐ Candidate block/report on a company appears in Admin's fraud dashboard
 - ☐ Pricing cards show unlock quota AND messaging cap per plan, with current plan highlighted
 - ☐ Subscription upgrade/downgrade correctly changes unlock + messaging limits
 - ☐ Company dashboard shows usage stats, invoice history, saved candidates with private notes
 - ☐ Enterprise plan: team seat invite flow works for additional recruiters under one company account
-

Phase 4 — Verification Portal

- ☐ `/verify` route accessible only to verifier role, not linked from public nav
- ☐ Review queue correctly splits into Fresher / Experienced / Executive tabs, oldest-first
- ☐ Profiles can be assigned to a specific reviewer (if multi-verifier)
- ☐ Fresher checklist shows clickable links to coding platforms, project URLs, GitHub, resume
- ☐ Experienced/Executive checklist shows LinkedIn, offer/experience letter, company-type

cross-check

- [] Approve action publishes the profile live immediately with verified badge
- [] Reject action requires a reason and is visible to the candidate
- [] Request More Info sends field-specific feedback and correctly locks only that field for candidate editing
- [] Flag as Suspicious escalates to Admin without silently rejecting
- [] Separate Achievements review queue works — verifier can mark each submitted project/paper/achievement as Verified or leave Self-reported
- [] Analytics tab shows accurate time-to-approve, backlog size, and rejection-reason breakdown

Phase 5 — Admin Portal

- [] `/admin` route restricted to admin role, with Super Admin vs limited Admin permission scoping working
- [] Candidate management: search/filter table, tier override, suspend/ban/delete, impersonate (logged), bulk export/announcement all functional

- [] Company management: approve/reject signups, edit subscription directly, grant bonus credits, suspend/ban, view unlock history
- [] Verification team management: add/remove verifiers, reassign queue items, override decisions, performance table
- [] Financial ledger shows all transaction types (subscriptions, unlocks, boosts) in one place
- [] Admin can manually refund/credit a transaction
- [] Admin can edit plan pricing and boost fee live, without a code deploy, and it reflects immediately on the Company Portal pricing page
- [] Revenue dashboards (MRR, churn, plan breakdown, boost vs subscription) show correct numbers
- [] Roles master list is editable from Admin and changes reflect instantly in all searchable role dropdowns
- [] Platform badges master list is editable from Admin
- [] Companies master list: admin can approve pending "add company" requests, edit MNC/FAANG flags, merge duplicates
- [] Skills and domain lists are editable from Admin
- [] Badge definitions/icons editable from Admin
- [] Broadcast tool successfully sends to filtered candidate or company segments

- ☐ Funnel analytics (candidate + company) render correctly
 - ☐ Fraud/abuse dashboard shows flagged profiles, rejection patterns, unlock spikes, and blocked/reported companies from messaging
 - ☐ Full audit log records every admin action with who/what/when
 - ☐ Admin can force-logout any account and view active sessions
-

Phase 6 — Payments & Notifications

- ☐ Razorpay subscription checkout works for Starter/Growth/Enterprise plans
- ☐ Razorpay one-time checkout works for pay-per-unlock and candidate boost purchases
- ☐ Webhook correctly upgrades/downgrades company plan access on payment success/failure
- ☐ Webhook correctly grants unlock credits / activates boost immediately on payment success
- ☐ All transactions logged in the `payments` table and visible in both Admin ledger and the paying user's own invoice history
- ☐ WhatsApp message sent correctly on: candidate status change, low unlock quota, subscription

renewal reminder, new message received

- ☐ Email sent correctly on: signup confirmation, status change, payment receipt, renewal reminder
 - ☐ Checkout uses Razorpay's hosted flow, not a custom card form
-

Phase 7 — PWA, Responsive

Polish & Security Hardening

- ☐ manifest.json has correct app name (from config), theme color, and install icons — app is installable
- ☐ Service worker provides an offline shell (no blank white screen when offline)
- ☐ Every screen re-checked at mobile (<640px), tablet (640–1024px), desktop (>1024px) — no overflow/broken layout/unreadable text
- ☐ RLS policies re-verified end-to-end against the Phase 1 spec (candidate own-row, company sees approved+unlocked-only, verifier scoped, admin full)
- ☐ Rate-limiting active on signup, OTP-request, and search endpoints
- ☐ CAPTCHA present on candidate and company signup forms

- ☐ 2FA enforced for all verifier/admin logins, no bypass path
- ☐ Duplicate-account check blocks obvious duplicate signups (same phone/email/resume link)
- ☐ Privacy Policy page live, explains contact-sharing-on-unlock clearly
- ☐ Terms of Service page live
- ☐ Consent checkbox present at candidate signup, linked to Privacy Policy
- ☐ App deploys cleanly from GitHub to Vercel with all API keys set as environment variables, none hardcoded in the repo
